Art Unit: 2684

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4,7,11-14,17 are rejected under 35 U.S.C. 102(b) as being anticipated by Feitsch [DE 197 44 263].

Regarding claims 1,11 Feitsch discloses a process for turning of electronic appliances for example mobile parts in security areas. Feitsch further discloses a portable radio telephone comprising:

- a radio section for receiving an input radio signal and/or transmitting an output radio signal. See page 2, page 3, paragraph 1 and page 5, paragraph 2
- a power supply controller for controlling supply of electric power to the radio section responsive to reception of a power-off signal; See MCR in Fig.3 and page 9, paragraph 3

the power-off signal being transmitted from a power-off signal transmitter provided in a prohibited area where use of a portable radio telephone is prohibited: See fig. 4 and page 10, paragraph 1 and

- a power-off signal sensor for sensing reception of the power-off signal to notify the power supply controller of reception of the power-off signal; See MCR in Fig.3 and page 9, paragraph 3

wherein when the power-off signal sensor senses reception of the power-off signal, the power supply controller stops supply of electric power to the radio section while keeping additional built-in functions other than communication function operable; see page 3, paragraph 3

and wherein when the power-off signal sensor does not sense reception of the power-off signal, the power supply controller continues supply of electric power to the-radio section. See page 5, paragraph 2

Application/Control Number: 10/00340

Art Unit: 2684

Regarding claims 2,12 Feitsch further discloses a method wherein:

- the connection controller sends a stop signal to a relating base station to the telephone to stop a connection operation of the base station to the telephone when the power supply controller stops, the supply of electric power to the radio section; See page 5, paragraph 2 and

the connection controller sends a stop release signal to the relating base station to the telephone to restart the connection operation of the base station to the telephone when the power supply controller restarts the supply of electric power to the radio section. See page 5, paragraph 2

Regarding claims 3,13 Feitsch discloses a method wherein the power-off signal sensor senses the reception of the power-off signal independent whether the radio section operates or not. See page 3, paragraph 2, page 5 paragraph 1 and page 6, paragraph 2 where a process is described for shutting down the functions of the telephone for example in a theater hall even while the phone is idle and not in a communication mode.

Regarding claims 4,14 Feitsch discloses a method wherein the power-off signal sensor senses the reception of the power-off signal independent of whether the radio section operates or not. See page 3, paragraph 2, page 5 paragraph 1 and page 6, paragraph 2 where a process is described for shutting down the functions of the telephone for example in a theater hall even while the phone is idle and not in a communication mode.

Regarding claims 7,17 Feitsch further discloses a method wherein the power-off release signal is transmitted from a power-off release signal transmitter in such a way that the power-off release signal sensor senses the power-off release signal when the telephone is carried out of the prohibited area. See page 5, paragraph 2.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 5,6,15,16,8-10,18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feitsch [DE 197 44 263] in view of Orimo [JP 407303134].

Regarding claims 5,6,15,16 Feitsch discloses all the limitations as claimed. However he does not disclose a method of storing a power-off code in the non-volatile memory and if the code is present then the power supply controller keeps the power supply to the radio section stopped and if the code is not present, then the power supply controller restarts the power supply to the radio section.

Orimo teaches a method wherein by operating the button on the keypad and setting the time on the keypad, (i.e. a power-off code/flag is set for the pre-determined time when the functions of the phone is disabled) the phone is set to meeting or theater mode where no call processing takes place and at the end of the timer period (i.e. when the power-off code is removed) the normal operating of the phone is resumed 1.e. power supply to the phone is re-started. Thus Orimo teaches a method of stopping and starting normal operations of the phone when desired such as when the user is in restricted areas such as hospitals, concert halls, etc. See English translation document page 1, paragraphs 6,12; page 2, paragraphs 13-24.

Therefore it would have been obvious to one with ordinary skill in the art at the time the invention was made to provide the above teaching of Orimo to Feitsch in order for the phone to stop and resume normal operating conditions automatically when the user has moved out of the restricted areas.

Application/Control Number: 10/00 40

Art Unit: 2684

Regarding claims 8,18 Orimo further telephone according to claim 1, wherein when the power-off signal is received, a fact that communication function is inoperable is displayed on a screen of a display section. See page 2, paragraph 10.

Regarding claims 9 and 10 Orimo further discloses a method wherein the power supply to the radio section can be manually stopped or started by a specific key operation made by the user. See page 2, paragraphs 12-18.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Irvin [US 6,556,819] Safe zones for portable electronic devices

Slettengren [US 2002/0028674] Politeness zone for wireless communication devices

Da Silva [US 6,496,703] System for disabling wireless communication devices

Yamashita [US 6,470,196] Portable communication apparatus

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sujatha Sharma whose telephone number is 703-305-5298. The examiner can normally be reached on Mon-Fri 7.30am - 4.00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nay Maung can be reached on 703-308-7745. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
